

On July 8th, 2000, Sara Joy Rychener and Jay David Burkholder pledged their lives to each other in marriage. On March 15th, 2002, their plans and dreams of raising a family together were altered as Sara gave birth to their first child. Jackson David was delivered by emergency cesarean section.

A few hours later Sara passed away from unknown causes. Due to the complication of being without oxygen during delivery, Jackson was diagnosed with Cerebral Palsy. His father and grandparents refused to accept the grim predictions about what Jackson would not be. Through extensive research efforts, we have located

alternative treatment processes called Hyperbaric Oxygen Therapy (HBOT) and Conductive Education (CE).

During our search and subsequent journeys for treatment for Jackson, we have met numerous families who are emotionally, physically and financially strained during their own quests for treatments. We are seeking to serve these families through a non-profit organization called "Sara's Garden."

Sara's Garden was established in May 2004 and treated its first clients with HBOT in April 2005. The CE program followed in the summer of 2006 with a half dozen children with neuromotor disorders. The program was initially housed in a local church with program oversight provided by a Hungarian Conductor Teacher.

Today both programs flourish on the same grounds at Sara's Garden. The recently refurbished HBOT building is furnished with two multiplace chambers. The CE program boasts a newly constructed (2007) Hope Center. Sara's Garden's property is located on 9.5 acres within the Wauseon city limits, making potential future expansion possible.

If you would like to receive any additional information regarding Sara's Garden, please feel free to contact us.

Our Services

Sara's Garden offers Hyperbaric Oxygen Therapy (HBOT) and Conductive Education (CE) services.

Hyperbaric Oxygen Therapy (HBOT):

FDA approved, insurance reimbursable conditions:

- Acute Traumatic Ischemia
- Air or Gas Embolism
- Anemia
- Carbon Monoxide Poisoning
- Chronic Wounds
- Compartment Syndrome
- Crush Injuries
- Decompression Sickness
- Diabetic Ulcers
- Gas Gangrene
- Intracranial Abscess
- Necrotizing Infections
- Osteomyelitis
- Radionecrosis
- Skin Grafts and Flaps
- Thermal Burns

FDA non-approved, non-reimbursable conditions:

- Amyotrophic Lateral Sclerosis
- Autism Spectrum Disorder
- Autoimmune Disorders
- Bacterial/Fungal Infections
- Bell's Palsy/Cerebral Palsy
- Cancer
- Carbon Monoxide Poisoning
- Hypoxic/Anoxic Brain Injury
- Lyme Disease
- Migraine
- Mitochondrial Disorder
- Multiple Sclerosis
- Near Drowning
- Pre/Post Surgical Healing
- Problematic Circulation
- Reflex Sympathetic Dystrophy
- Seizure Disorder
- Skin Disorders
- Spinal Injury
- Sports Injury
- Stem Cell Transplantation
- Stroke
- Traumatic Brain Injury
- Wound Healing

Conductive Education (CE):

- Cerebral Palsy
- Parkinson's Disease
- Spina Bifida
- Stroke
- Traumatic/Acquired Brain Injury

HOPE. HELP. HEALING.
